

STACKED CARGO COVER STORAGE SYSTEM AND METHOD  
OF STORING THEREOF

ABSTRACT OF THE DISCLOSURE

A cargo storage system for a vehicle having a cargo bay includes cover members adapted to cooperate with each other to at least partially cover and at least partially uncover the cargo bay. The system further includes two bracket assemblies configured to be connectable and disconnectable from the vehicle. The bracket assemblies are adapted to support at least one of the cover members above the other cover members when the bracket assemblies are connected to the vehicle such that the cover members are secured to the vehicle in a relatively stacked manner above the cargo bay and the cargo bay is at least partially uncovered. A method of storing a cargo cover is also provided.
